

***Imperial Woodworks, Inc.* Products Are Now on Sweets**

Through the New Sweets app for Revit®, Architects & Design Professionals Will More Easily Search, Select & Annotate *Imperial's* Products in Their Designs

Waco, TX –August 12, 2016— Imperial Woodworks, Inc. today announced that it has signed on to include its products in Sweets, the interactive building product database that reaches hundreds of thousands of design professionals through its website and workflow integration solutions. With the recent launch of the Sweets app for Revit, **Imperial's church pews, courtroom benches, auditorium seating, stack chairs, and altar furniture** will now be available within the design professionals' workflow.

As a leading building product source for AEC professionals (Architects, Engineers and Contractors), Sweets provides comprehensive product information, CAD, BIM, specs, CEUs and more. And now with the Sweets app for Revit, design professionals can easily annotate (TAG) Imperial's product information within their projects, by utilizing the Sweets ProductTAG.

"The Sweets app for Revit is a game-changer for today's design professionals and building product manufacturers. By immersing product selection directly in the workflow, this innovative application places products in front of design professionals at the earliest possible stage, while simplifying product selection and reducing errors and omissions," said **Mike Petruzzo, Chief Executive Officer of Dodge Data & Analytics, Sweets' parent company.**

"Advances in technology have rapidly transformed the construction industry in recent years, and the new Sweets app is destined to be one of most significant advances. By seamlessly connecting specific products – and the product manufacturers - to each project during the design phase, considerable amounts of time and money will be saved. This will benefit the suppliers, designers, owners, and everyone involved," said **Kevin Smith, Vice President & Director of Marketing at Imperial Woodworks, Inc.**

The Sweets app for Revit is the first app created through Dodge Data & Analytics' partnership with Global Product Data LLC. The app is available for download in the Autodesk App Store or at Sweets.com. An AutoCAD version will be released in the coming months. For information on the Sweets app: SweetsInfo@construction.com

About Sweets: Sweets is a product of Dodge Data & Analytics, the leading provider of construction project data, news and market intelligence serving the North American construction industry. The company's information enables building product manufacturers, general contractors and subcontractors, architects and engineers to size markets, prioritize prospects, target and build relationships, strengthen market positions, and optimize sales strategies. The company's products include Sweets, Dodge Global Network, Dodge MarketShare™, Dodge BuildShare®, and Dodge SpecShare®. To learn more, visit <http://www.construction.com>
